

Rong Yi

PhD

Director, New York Health

Risk Adjustment and Predictive Modeling

Practice; Senior Consultant

CURRENT RESPONSIBILITY

Rong is a principal with the New York office of Milliman. She joined the firm in 2009.

EXPERIENCE

Rong has extensive experience in healthcare analytics, especially in the fields of risk adjustment and predictive modeling. She has worked with private insurers, providers, employers, government agencies, and researchers in the United States and other parts of the world. She is a frequent speaker at professional and academic conferences.

Rong has done pioneering work in a number of areas, including state-based risk adjustment programs for the commercial markets and for the uninsured population, risk-based provider contracting and profiling, risk-adjusted episodes of care, and predictive models for a variety of business applications. She works with clients to implement analytic methodologies and tools into their business process, and in this capacity assists clients to develop business rules and operational guidance to ensure program operational success. Most recently, she is the lead consultant for the Massachusetts ACA risk adjustment program, and led the development, implementation and operations of the Massachusetts state-based risk adjustment methodology for the commercial individual and small group market.

Before joining Milliman, Rong was a major contributor to commercial and governmental risk adjustment systems in wide use today.
