

Estimating undisclosed flood risk in real estate transactions in New Hampshire

Financial Implications for single-family home buyers

Commissioned by Natural Resources Defense Council (NRDC)

Purpose of Report

The Natural Resources Defense Council (NRDC) is a not-for-profit organization that engaged Milliman, Inc. (Milliman), an independent actuarial consulting firm, to study the potential amount of undisclosed flood risk in 25 states by estimating the total number of homes damaged by prior flooding.

Background

Like most states, those in the study area generally do not have laws that effectively require that flood damage be disclosed in real estate transactions. Homes that have experienced flooding in the past are more likely to experience flood damage in the future, meaning buyers of previously damaged homes can unknowingly purchase homes that are at an increased risk of flooding relative to the average home. Milliman estimates that 4% of homeowners in the United States have any flood insurance coverage, potentially leaving unsuspecting buyers of previously damaged homes to be substantially more at risk of paying out of pocket for unexpected flood damages. Additionally, these home buyers could be less likely to purchase flood insurance without the awareness that a home had previously flooded or take actions to lower their risk of flood damage in the future such as raising the home or relocating important systems. Those home buyers who do purchase insurance may be subject to higher premiums to insure their homes than they had anticipated.

The following information is only specific information about the impact of flooding on the state. For a comparison of all the states in the study area as well as full details of the data sources and methodology used in the study, read the [full report](#).

FIGURE 1: AVERAGE STANDARD AAL FOR DAMAGED HOME BY MSA

TABLE 1: RANKING OF KEY METRICS IN 25 STATE STUDY AREA

NFIP paid claims count	19 th
NFIP average claim amount	19 th
Percent of homes with prior flood damage	13 th
Home sales with prior flood damage	20 th
Average Standard AAL of home with prior flood damage	6 th
Total cost of flooding for sold homes with prior flood damage	11 th

State Summary

New Hampshire has had 499 NFIP claims since 2010 with a total paid loss amount of \$9,613,690 for single-family homes. In New Hampshire, our analysis estimates that 2,982 homes have been previously flooded between 2010-2024 (0.8% of all single-family homes) and 116 of those were subject to sale in 2023. The total expected annual cost of flooding for these sold homes (average AAL * the home sales by MSA) is \$483,824.

FIGURE 2: SUMMARY STATISTICS ON NUMBER OF SINGLE-FAMILY HOMES

Total Single-Family Homes	372,919
Single-Family Homes with NFIP Claim (since 2010)	499
Estimated Single-Family Homes with Flood Damages	2,982
Estimated 2023 Home Sales with Flood Damages	116
Total Cost of Flooding	\$483,824

The map in Figure 1 shows the average Standard AAL for damaged homes by MSA across the state of New Hampshire. The average Standard AAL for a previously damaged home varies from \$2,054 to \$4,832 depending on the MSA in New Hampshire. This shows that the state average AAL of \$4,036 does not fully illustrate the potential financial impact for certain geographies.

In the analysis, Boston-Cambridge-Newton is the only MSA with a percentage of single-family homes with prior damage above 1%. It also has the highest average AAL, \$4,832, and the most estimated homes with prior flood damage, 1,859. This accounts for 62% of all the estimated homes with prior flood damage in New Hampshire.

New Hampshire has the 7th largest difference in AAL, \$3,902, between a home that has been previously flooded and the state average for the Standard scenario. This dollar difference grows by 60% under the High scenario to \$6,236. Overall, the effect of climate change may adversely impact homeowners whose homes have already been flooded more than the average homeowner in the state.

FIGURE 3: AVERAGE ANNUAL LOSS BY SCENARIO

	Climate Scenario		
	Standard	Medium	High
AAL All Homes	\$155	\$180	\$214
AAL Damaged Homes	4,036	4,709	6,424

The total cost of flood damage over the life of a 15-year or 30-year period is expected to be a significant amount for a home with previous flood damage. If a home is occupied for 15 years in New Hampshire, we would expect an average flood cost of \$60,534 over the 15-year period ($\$60,534 = 15 * \$4,036$). This difference in flood costs highlights the importance of flood disclosure laws so that home buyers have a clear picture of the potential financial burden from flooding.

FIGURE 4: AVERAGE ANNUAL LOSS BY SCENARIO

Average Flood Cost	Climate Scenario		
	Standard	Medium	High
15 Year	\$60,534	\$70,633	\$96,356
30 Year	121,069	141,267	192,712
